Anthura[®]
unlimited in varieties

Introduction

Anthura is the expert in breeding and propagation of Anthurium and Phalaenopsis. We are known for our innovative growing solutions, and leading range of strong Anthurium varieties. Every day, we challenge ourselves to develop new varieties, new colours and new shapes.

Unlimited in Varieties, offering Unlimited Possibilities

Anthura is the worldwide specialist in Anthurium and Orchids. With our extensive knowledge of genetics and young plants, we provide growers with everything they need for a sustainable and profitable chain. Our operational management makes the world more beautiful for present and future generations.

As a breeder and propagator, we are constantly working on the development of new techniques to achieve these goals. In addition, we focus on stimulating entrepreneurship, a more sustainable chain and international cooperation. This vision is applied to our offices in the Netherlands, Germany, North-Macedonia and China.

Our Research & Development department has sequenced and mapped the DNA of Orchids and Anthurium in 2018. A unique milestone in horticulture. We have now invested in the infrastructure,

technology and people to translate this breakthrough into a more sustainable production of Anthuriums and Orchids, an increase of your (our customers) return on investment, growth model and predictability and the fulfilment of the needs of other chain partners and consumer preferences worldwide.

Years of focus on innovative and sustainable product development have resulted in an unlimited assortment of strong and colourful varieties with a long flowering period.

Pioneering for success together with you is a huge motivator. Together we develop a strategy to make you our primary focus in the market.

Hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy our plants and flowers every day.

Sustainable entrepreneurship is in our DNA

We continuously strive to make innovative improvements in our production processes and our focus is on how to make it more sustainable. We are committed to reducing our environmental impact. By means of the development of varieties that can be produced with less energy and fewer water and plant protection products due to built-in resistances and improved product properties, we will achieve this.

We cooperate with other companies and share our knowledge to make the chain and society more sustainable. This pillar is also reflected in our personnel policy.

‘Sustainability is a cornerstone of our mission’

However, sustainability goes further than this. Due to an intrinsic drive we are dedicated, on both national as international level, to several projects in the field of biodiversity and other sustainable development goals.

Sustainability is high on our agenda.

This is also recognized outside the company by the fact that we have won the Plantum Sustainability Award (2018), the Horticultural Business Award (2019), we were the Gold Rose winner at the International Grower of the Year Awards as well as the winner in the category ‘sustainability’ (2020) and we were finalist of the King William I Award SMEs (2021).

proud member of FSI

Unoform: Unity in variety

Unoform is the new standard for Anthurium plugs and stands for unity in diversity. With the introduction of Unoform, Anthura is able to deliver the best uniform plant material.

From now on the young plants are planted as a single plug in a 180-cell tray. After grading, the plants are put back with 90 plugs in a new 180-cell tray. The plugs are analyzed by a new, advanced camera and put together by grade. The result is a tray with uniform single plugs.

Changes

With a plant size of 7-12 cm, the Unoform SP1 plug is more compact. The planned growth time of the Unoform plugs can no longer be exceeded, as this will be detrimental to the plant quality. When the plugs are ready, they must be transplanted. The young plant type of 20-25cm in a 9cm pot has remained the same.

With Unoform we offer uniform plant material and a choice of three different product types. After all, high quality starting material is the foundation for successful cultivation.

Unoform cut culture table

Article type	Description	Medium	Quantity/tray	Length
SP1	18 mm plug - 1 plant	paper plug	90	7-12 cm
6SP1 (NEW)	56 mm plug - 1 plant	paper plug/rockwool	28	12-20 cm
201	9 cm pot - 1 plant	paper plug/rockwool	Loose in P9	20-25 cm

SP1

Paper plug

The plants are grown in a paper plug. The structure of the plug allows better moisture absorption after transport and an improved development of the roots. This results in a more uniform growth.
