

Anthurium pot plant catalogue

2022 / 2023

Introduction

We bring genetics to bloom

As the worldwide specialist in Orchid and Anthurium, we challenge ourselves every day to develop new varieties, new colours and new shapes. Hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy our plants and flowers every day.

Unlimited in varieties, offering unlimited possibilities

We colour the world

Anthura is the worldwide specialist in Anthurium and Orchids. With our genetic knowledge, young plants and expertise, we supply growers in more than 70 countries with the products and knowledge necessary for a sustainable and profitable chain, making the world a better place for current and future generations. With offices in the Netherlands, Germany, China and North Macedonia, we are committed to an international production infrastructure that guarantees product quality and delivery reliability. Our research and production facilities are among the most advanced in the world.

Research and breeding

As breeder and propagator of more than 100 commercial Anthurium pot plant varieties, we are constantly working on the development of new techniques to achieve these goals. Digitization and technology are developing at a breakneck pace. Our passion and enthusiasm underpin our cutting-edge research and development processes. Thanks to these techniques, we develop varieties of increasingly better quality and can continue moving forward. We are also looking for opportunities to use these techniques in other areas. We constantly invest in unique solutions and special properties in our modern breeding locations, our research centre and, above all, the best people in this field.

Laboratories

Our laboratories in China, North Macedonia and the Netherlands give us great flexibility in the propagation of our plant material. Our global presence spreads the risk and provides the stability in a variety of situations to ensure the optimum delivery reliability to our own production facilities in Germany, China and the Netherlands.

Collaboration

Distinctive entrepreneurship is about more than a streamlined supply of high-quality plant material. We also innovate by entering win-win partnerships, as it is important to play a connecting role in the chain and to share knowledge about developments and trends in consumption, production, breeding and technology. In doing so, we contribute to a promising future for our customers.

Our growers

Together with you, we strive for success. It is tremendously motivational to develop a strategy together and to make you our primary focus in the market. The result is that hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy our, and your, plants and flowers every day.

Team Anthura

Sustainable entrepreneurship is in our DNA

"Sustainability goals are part of the organization's main objectives at the highest possible level. The drive to improve our processes and the use of the most modern technology are the means to a more sustainable business operation."

We bring genetics to bloom

We focus on reducing the environmental impact by developing varieties with improved product properties. By developing varieties with increased resistance to diseases and pests and lower energy and water requirements, our genetics have an impact on our customer and therefore the entire chain.

Energy

Our biggest contribution to sustainability can be achieved in the field of energy. To this end, we use and contribute to technological solutions and innovations, such as LED lighting, solar panels, counterflow, closed greenhouse departments, three-layer screening, heat clustering, heat pumps, geothermal warmth, and CHP (combined heat and power generation).

Water

Efficient and sustainable water use is also common practice, by means of rainwater collection and storage and the recirculation of irrigation water.

Smart sustainability

With the introduction of our 'Kas in Kas' ('Greenhouse in Greenhouse') system, we have proven that low energy consumption and crop improvement can go hand-in-hand. With the knowledge gained from our crops, we work on cultivation systems that help us achieve our sustainability goals.

We bring nature home

However, sustainability goes further than this. As a result of our intrinsic drive, we are deeply involved in several national and international projects in the field of biodiversity and other sustainable development goals.

Unoform: Unity in variety

Unoform is the new standard for Anthurium plugs and stands for unity in diversity. With the introduction of Unoform, Anthura is able to deliver the best uniform plant material.

From now on the young plants are planted as a single plug in a 180-cell tray. After grading the plants are put back with 90 plugs in a new 180-cell tray. The plugs are analyzed by a new, advanced camera and put together by grade. The result is a tray with uniform single plugs.

The advantages

Planting two single plugs together results in a significantly more uniform cultivation with a higher percentage of finished plants.

Another advantage is that the total cultivation time is reduced because the flowering areas in the greenhouse can be emptied more quickly. With naturally less uniform varieties, the difference will be particularly noticeable. There are more types available, so we can meet your demand better.

In a nutshell, with Unoform, Anthura offers you:

- Best uniform plant material;
- More variety in product types;
- Benefits in total cultivation speed due to better uniformity.

Unoform pot culture table

Article type	Description	Number/tray	Intended for *	Length
PP1L	18 mm plug - 1 plant	90	9 cm	6-12 cm
6PP2	56 mm plug - 2 plants	28	12/14 cm	10-16 cm (NEW)
7PP2	65 mm plug - 2 plants	18	14 cm	14-19 cm
9PP2	9 cm pot - 2 plants	Loose in P9	from 17 cm	17-25 cm

*Anthura will advise which type is the best choice for you as a customer.

Paper plug

The plants are grown in a paper plug. The structure of the plug allows better moisture absorption after transport and the development of the roots is better. This results in a more uniform growth.

New 180-cell tray

Young plant growth (Anthura)

4 months (plugØ 18 mm)
6-12 cm plant size

7 months (plugØ 65 mm)
14-19 cm plant size
