

Phalaenopsis pot plant catalogue

2022 / 2023

Introduction

We bring genetics to bloom

As the worldwide specialist in Orchid and Anthurium, we challenge ourselves every day to develop new varieties, new colours and new shapes. Hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy our plants and flowers every day.

Unlimited in varieties, offering unlimited possibilities

We colour the world

Anthura is the worldwide specialist in Anthurium and Orchids. With our genetic knowledge, young plants and expertise, we supply growers in more than 70 countries with the products and knowledge necessary for a sustainable and profitable chain, making the world a better place for current and future generations. With offices in the Netherlands, Germany, China and North Macedonia, we are committed to an international production infrastructure that guarantees product quality and delivery reliability. Our research and production facilities are among the most advanced in the world.

Research and breeding

As breeder and propagator of more than 250 commercial Phalaenopsis varieties, we are constantly working on the development of new techniques to achieve these goals. Digitization and technology are developing at a breakneck pace. Our passion and enthusiasm underpin our cutting-edge research and development processes. Thanks to these techniques, we develop varieties of increasingly better quality and can continue moving forward. We are also looking for opportunities to use these techniques in other areas. We constantly invest in unique solutions and special properties in our modern breeding locations, our research centre and, above all, the best people in this field.

Laboratories

Our laboratories in China, North Macedonia and the Netherlands give us great flexibility in the propagation of our plant material. Our global presence spreads the risk and provides the stability in a variety of situations to ensure the optimum delivery reliability to our own production facilities in Germany, China and the Netherlands.

Collaboration

Distinctive entrepreneurship is about more than a streamlined supply of high-quality plant material. We also innovate by entering win-win partnerships, as it is important to play a connecting role in the chain and to share knowledge about developments and trends in consumption, production, breeding and technology. In doing so, we contribute to a promising future for our customers.

Our growers

Together with you, we strive for success. It is tremendously motivational to develop a strategy together and to make you our primary focus in the market. The result is that hundreds of growers in professional horticulture grow our colourful varieties, allowing millions of consumers to enjoy our, and your, plants and flowers every day.

Team Anthura

Sustainable entrepreneurship is in our DNA

"Sustainability goals are part of the organization's main objectives at the highest possible level. The drive to improve our processes and the use of the most modern technology are the means to a more sustainable business operation."

We bring genetics to bloom

We focus on reducing the environmental impact by developing varieties with improved product properties. By developing varieties with increased resistance to diseases and pests and lower energy and water requirements, our genetics have an impact on our customer and therefore the entire chain.

Energy

Our biggest contribution to sustainability can be achieved in the field of energy. To this end, we use and contribute to technological solutions and innovations, such as LED lighting, solar panels, counterflow, closed greenhouse departments, three-layer screening, heat clustering, heat pumps, geothermal warmth, and CHP (combined heat and power generation).

Water

Efficient and sustainable water use is also common practice, by means of rainwater collection and storage and the recirculation of irrigation water.

Smart sustainability

With the introduction of our 'Kas in Kas' ('Greenhouse in Greenhouse') system, we have proven that low energy consumption and crop improvement can go hand-in-hand. With the knowledge gained from our crops, we work on cultivation systems that help us achieve our sustainability goals.

We bring nature home

However, sustainability goes further than this. As a result of our intrinsic drive, we are deeply involved in several national and international projects in the field of biodiversity and other sustainable development goals.

CupGrade

The new standard in Phalaenopsis

- ✓ Less labour
- ✓ Less transport
- ✓ Less waste

Old Cups

CupGrade
THE NEW STANDARD

CupGrade is the new standard in the production of Phalaenopsis worldwide. Today's tissue culture plants are supplied in small round plastic cups. From now on, Anthura will supply tissue culture plants in CupGrade: plants will be taken out, cleaned of agar, graded and packed under sterile conditions. A CupGrade container contains many more plants.

CupGrade offers a lot of benefits: it is more sustainable in several ways, for both you as a customers and for us. Other benefits are listed below:

- As plants are already graded and cleaned of agar, planting can start straight away, thus reducing your labour costs by up to 50%;
- A CupGrade container contains many more plants. During transport the load factor will at least be doubled;
- Plants can be stored for at least two weeks in temperature-controlled storage;
- The plants are agar-free, which means a cleaner and more hygienic start;
- Reduction of packaging waste.

Storage

CupGrade plants can be stored for at least two weeks in temperature-controlled storage thanks to their sterile processing. This offers the maximum flexibility when it comes to planning labour and space requirements. The optimal conditions are a temperature of 19-20°C, and storage in the dark.

Planning

After an intensive testing period, we are delivering the first CupGrade batches since 2020. CupGrade is now available for all our customers.

Sustainability

As a CupGrade container offers much more plant capacity, many more plants can be loaded on the truck or plane. As the load factor is higher, this means lower transport volumes, as a result of which the CO₂ emission per plant will be lower. Also, with lower transport volumes, less plastic will be used in production processes, and the plastic that we do use is clean and recyclable. CupGrade is a much more sustainable solution.

Young plant growth (Anthura)

0 months
5-8 cm leaf span

6 months (young plant)
10-14 cm leaf span

Cultivation stage (grower)

13 months (cooling time)

17 months finished

Manta More

NEXT GENERATION ORCHIDS

mantamore.com

Manta More: the Next Generation Orchid

The Manta More series is the 'Next Generation' Orchid. The lip of the Manta More is larger, which makes the appearance of the Orchid impressive. It is more vigorous, more open and flatter; in short, a plant with a confident appearance. With Manta More, More Manta!

If you look closely at the flower, you can see why this series is called Manta More. The flower has a unique silhouette that evokes the graceful Manta rays! Like these tropical animals, Manta More Orchids are large, voluminous and powerful, yet graceful and elegant. This is how the Manta ray moves through the oceans.

Manta More: More Power, More Open,
More Flower, More Charisma,
More Orchid!
